

# SUPPLEMENTARY FIGURE. Weekly percentage of counties with differences between COVID-19 Community Levels and COVID-19 hospital admission levels\* — United States, February 24, 2022–March 23, 2023

**Abbreviation:** CCL = COVID-19 Community Level.

\* Percent agreement for weekly CCLs and COVID-19 hospital admission levels (<10.0, 10.0-19.9, ≥20.0 per 100,000 population) was calculated among the 3,220 counties (and county-equivalent areas) during February 24, 2022–March 23, 2023 (i.e., since CCLs began). Weekly percentages of counties with differences in level categories were graphed as (1- percent agreement) by CCL category. The number of counties with different community and admissions levels has remained low (<1%) since April of 2022. The largest recorded difference was slightly above 6% (204 of 3,220) counties in February 2022. When the levels were discordant, the CCL was higher than the admission level.
